The Challenge

Anaplan models evolve and grow quickly, in large part due to their agile development roots. Even the best designs are subject to excess data build-ups and inefficiencies along the connected planning journey. As a result, increased model "bloating" can decrease overall performance -- the scourge of all user experience.

Our Solution

Allitix's *ModelAdvisor* built in Anaplan takes the blueprint of an existing model and performs a line-by-line analysis to check for best practices and recommendations per Anaplan's PLANual (best practices) guidelines. It leverages the enhanced visual capabilities of Anaplan's new UX and can handle an unlimited number of models. *ModelAdvisor* eliminates the guesswork associated with maintaining optimal performance of planning models.

About Allitix

Allitix resources offer an unconstrained approach to client challenges, afforded by the firm's multidisciplinary expertise. We seamlessly become part of our clients' specialized solution ecosystem and democratize knowledge to optimize their transformation.

Model Advisor

✓ Upload unlimited models for analysis and recommendations

✓ Accelerates user adoption

✓ Increases workspace availability and optimizes efficiency

✓ Makes recommendations without directly applying changes to the analyzed models

✓ Visually appealing dashboard in new Anaplan UX

✓ Error-checking for any new recommendations as soon as updates are made to Anaplan PLANual

"Recently implemented Anaplan Models were very large in size, with risk of exceeding workspace size cap, indicating potential inefficiencies in design. Key outcome was a clear recommendation on how to achieve 58% potential savings in overall model size. Allitix delivered real value very quickly through their model advisory service, highlighting their depth of knowledge and expertise on the Anaplan platform."
– Brad, Director of Finance Technology at Oxford Property Group
